Professional Summary

Research-oriented AI/ML student with experience in LLM evaluation, physics-informed neural networks, predictive modeling, and AI automation. Skilled at turning research ideas into tested prototypes through structured experimentation, model evaluation, and cross-functional collaboration. Interested in efficient AI systems, edge intelligence, and practical LLM deployment.

Experience

PetsGO & Petsdoor Pvt. Ltd.

AI/ML Intern — *Apr. 2026 – Jun. 2026*

- Engineered a multi-physics PINN framework comprising five specialized neural models, incorporating adaptive losses, surrogate modeling, and training optimizations.
- Evaluated mini-batch training, physics subsampling, hybrid Adam/L-BFGS optimization, and mixed-precision training to improve computational efficiency.
- Co-led agriculture-domain LLM research spanning knowledge distillation, context-window optimization, inference parameters, and tokenizer analysis; coordinated documentation and milestones.

Technologies: Python, PyTorch, TensorFlow, PINNs, LLMs.

ASTRIYVA

AI Research Intern — *Dec. 2025 – Jan. 2026*

- Conducted AI/LLM experiments and evaluations, improving response accuracy while reducing iterative development time by 30%.
- Optimized prompts and analyzed model behavior, reducing hallucinations and improving output reliability by 25%.
- Built API-based AI proofs of concept and automations, improving team efficiency by 25%; partnered with engineering and product teams to reduce manual effort by 20%.

Technologies: Python, LLM APIs, prompt engineering, model evaluation.

Scaler School of Technology — Remote, India

Young Innovator Intern — *Jun. 2024 – Aug. 2024*

- Analyzed AI adoption frameworks for early-stage startups, identifying opportunities to improve product velocity and reduce operational workload by an estimated 30–40%.
- Built and deployed a personal portfolio website that doubled profile engagement.
- Analyzed YouTube recommendations, identifying more than five growth-related ranking factors; studied customer funnels, segmentation, and campaign strategy.

Technologies: AI research, web development, Vercel, digital analytics.

Selected Project

Athena AI — Student Performance Prediction System — Jun. 2025 – Nov. 2025

- Developed a performance prediction system using linear regression and Monte Carlo simulation, modeling study hours, sleep patterns, and prior performance.
- Ran more than 1,000 simulations to produce probabilistic score ranges and confidence intervals.
- Built an interactive interface presenting predictions, trends, visual analytics, and actionable insights.

Technologies: Python, NumPy, pandas, scikit-learn, Monte Carlo simulation.

Education

VISAT Engineering College

B.Tech. in Artificial Intelligence & Machine Learning — *Expected May 2028*

Indian Institute of Technology Madras — Online

Degree in Data Science and Applications — *Ongoing*

- Relevant coursework: Computational Thinking, Mathematics I, Statistics I, and Python with laboratory work.

Technical Skills

Programming: Python

ML/AI: PyTorch, TensorFlow, scikit-learn, LLMs, generative AI, prompt engineering, context engineering

Data: NumPy, pandas, data pipelines, model evaluation

Tools: Git, GitHub, Linux, Jupyter Notebook, Vercel, Raspberry Pi OS

Languages: English, Telugu, Malayalam, Hindi

Leadership & Activities

Leadership: CEO, IEDC VISAT; Co-Lead, μLearn VISAT; Community Head, ADC.

Technical contributions: Webmaster, IEEE VISAT; former CTO, IEDC VISAT; organizer of technical events and workshops; presenter at college showcases and technical forums.
